

Editorial welcome

Leonard Gould comes to the rescue!

Leonard Gould has gained several new customers during December as a result of their supplier closing his business just before Christmas. A Sussex based box maker ceased production during December, which gave these long term major customers of die cut boxes the challenge of finding a new supplier to match the service they had received in the past.

Contact was quickly established by Leonard Gould to conduct a packaging audit followed by a cost effective solution and rapid response supply to ensure continuity of activities.

Production of these boxes was effortlessly achieved using our new CVK 1330 platen press.

Die cut boxes offer good cost reduction opportunities such as reduced storage required when delivered in lay-flat form. Design styles can include integral buffers to reduce the number of components in your pack. Printing details of your website on the boxes will enhance your company and product image.

Welcome to the first edition of our monthly news letter. Editorial content will cover day to day developments of interest at Leonard Gould plus useful packaging related items.

The move to our new factory with a large integrated manufacturing hall has been successfully completed in time to provide us with a cost-effective, environmentally efficient and flexible facility that is more appropriate to our needs, for rapid response, lean manufacturing methods.

This move ensures that your packaging supply will be guaranteed for the foreseeable future at the lowest possible cost. In a later issue we will introduce your account managers who continually work to reduce your packaging spend year on year.

This month we look at supply sustainability challenges faced during these difficult times. In Issue two we celebrate the achievement by a team member of 50 years continuous service, more next month.

“ Production of these boxes was effortlessly achieved using our new CVK 1330 platen press ”
